

ISOMETER[®] iso685-...-B

Insulation monitoring device for unearthed AC, AC/DC and DC systems (IT systems)

iso685-x-B_D00177_04_D_XXEN/04.2018

ISOMETER® iso685-...-B

Insulation monitoring device for unearthed AC, AC/DC and DC systems (IT systems)

ISOMETER[®] iso685-D-B

Device features

- ISOMETER[®] for IT AC systems with galvanically connected rectifiers or inverters and for IT DC systems (IT = unearthed systems)
- Automatic adaptation to the existing system leakage capacitance
- Combination of AMP^{Plus} and other profilespecific measurement methods
- Two separately adjustable response value ranges of 1 k Ω ...10 M Ω
- High-resolution graphic LC display for excellent readability and recording of the device status
- Connection monitoring (monitoring of the measuring lines)
- Automatic device self test
- Graphical representation of the insulation resistance over time (isoGraph)
- History memory with real-time clock (buffer for three days) for storing 1023 alarm messages with date and time
- Current or voltage output 0(4)...20 mA, 0...400 µA, 0...10 V, 2...10 V (galvanically separated), which is analogous to the measured insulation value of the system
- Freely programmable digital inputs and outputs
- Remote setting via the Internet or Intranet (Webserver/Option: COMTRAXX[®] Gateway).
- Worldwide remote diagnosis via the Internet
- RS-485/BS (Bender sensor bus) for communication with other Bender devices
- ISOnet: Internal separation of the ISOMETER® from the IT system to be monitored (e.g. if several IT systems are interconnected)
- BCOM, Modbus TCP and web server

Product description

The ISOMETER[®] is an insulation monitoring devices in accordance with IEC 61557-8 for IT systems. The devices are universally applicable in AC, 3(N)AC, AC/DC and DC systems. AC systems may include extensive DC-supplied loads (such as rectifiers, inverters, variable-speed drives).

Application

- AC, DC or AC/DC main circuits
- AC/DC main circuits with directly connected DC components, such as rectifiers, converters, variable-speed drives
- UPS systems, battery systems
- · Heaters with phase control
- Systems including switch-mode power supplies

BENDER

coupled IT systems with high leakage capacitances

Function

The insulation monitoring device continuously monitors the entire insulation resistance of an IT system during operation and triggers an alarm when the value falls below a preset response value. To obtain a measurement the device has to be connected between the IT system (unearthed system) and the protective earth conductor (PE). A measuring current in the μ A range is superimposed onto the system which is recorded and evaluated by a microprocessor-controlled measuring circuit. The measuring time is dependent on the selected measurement profiles, the system leakage capacitance, the insulation resistance and possible system-related disturbances.

The response values and other parameters are set using a commissioning wizard as well as via different setup menus using the device buttons and a high-resolution graphical LC display. The selected settings are stored in a permanent fail-safe memory. Different languages can be selected for the setup menus as well as the messages indicated on the display. The device utilises a clock for storing fault messages and events in a history memory with time and date stamp. The settings can be password protected to prevent unauthorised changes.

To ensure proper functioning of connection monitoring, the device requires the setting of the system type 3AC, AC or DC and the required use of the appropriate terminals L1/+, L2, L3/-.

The insulation monitoring device iso685-x-B is able to measure the insulation resistance reliably and precisely in all common IT systems (unearthed systems). Due to various applications, system types, operating conditions, application of variable-speed drives, high system leakage capacitances etc., the measurement technique must be able to meet varying requirements in order to ensure an optimised response time and relative uncertainty. Therefore different measuring profiles can be selected with which the device can optimally adjusted.

If the preset response value falls below the value of Alarm 1 and/or Alarm 2, the associated alarm relays switch, the LEDs ALARM 1 or ALARM 2 light and the measured value is shown on the LC display (in case of insulation faults in DC systems, a trend graph for the faulty conductor L+/L- is displayed). If the fault memory is activated, the fault message will be stored. Pressing the RESET button resets the insulation fault message, provided that the current insulation resistance displayed at the time of resetting is at least 25 % above the actual response value. As additional Information, the quality of the measuring signal and the time required to update the measured value are shown on the display. A poor signal quality (1-2 bars) may be an indication that the wrong measurement profile has been selected.

The ISOMETER® has an internal system isolating switch, which makes it possible to operate several ISOMETER®s in coupled IT systems. For this purpose, the ISOMETER®s are connected via an Ethernet bus. The integrated ISOnet function ensures that only one ISOMETER® is actively measuring at a time, while the other devices are completely isolated from the system and waiting in standby mode for measuring permission.

The ISOMETER® is able to synchronise itself with other ISOMETER®s. This makes it possible to monitor capacitive coupled IT systems without interfering with each other.

Interfaces

- Communication protocol Modbus TCP
- BCOM for Bender device communication via Ethernet
- BS bus for communication of Bender devices (RS-485)
- Integrated web server for reading out measured values and for parameter setting

Device variants

iso685-D-B

This device variant features a high-resolution graphic LC display and operating controls for direct operation of the device functions. It **cannot** be combined with an FP200.

iso685-S-B

This device variant features **neither a display nor operating controls**. It can only be used in combination with the FP200 and it is operated via this front panel.

Option "W"

The ISOMETER®s with and without integrated display are available with option "W" for extreme climatic and mechanical conditions (ISOMETER® iso685W-D-B and iso685W-S-B).

Measurement method

AMPPlus The iso685-...-B series uses the patented **AMP**^{Plus} measurement method. This measurement method allows concise monitoring of modern power supply systems, also in case of extensive, directly connected DC components and high system leakage capacitances.

Standards

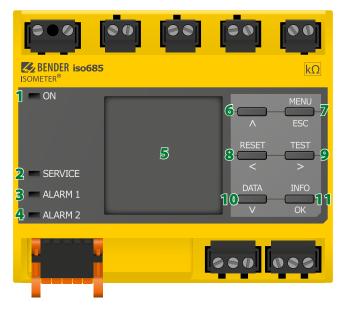

The ISOMETER[®] has been developed in compliance with the following standards:

- DIN EN 61557-8 (VDE 0413-8):2015-12
- IEC 61557-8:2014-12
- IEC 61557-8:2014/COR1:2016
- DIN EN 61557-8 Ber 1 (VDE 0413-8 Ber 1):2016-12

Certifications

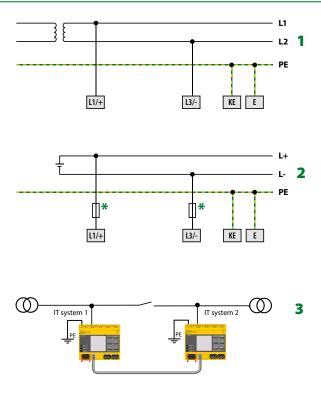

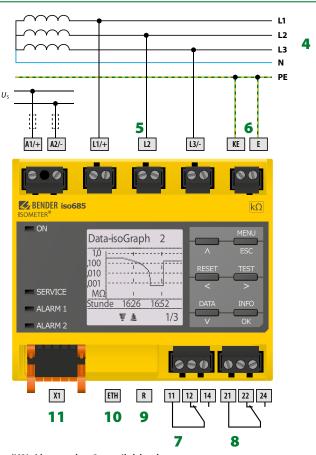

Operating elements

- 1 ON The LED "ON" lights when the device is turned on.
- 2 SERVICE The LED "SERVICE" lights when there is either a device fault or a connection fault, or when the device is in maintenance mode.
- 3 ALARM 1 The LED "ALARM 1" lights when the insulation resistance of the IT system falls below the set response value *R*_{an1}.
- 4 ALARM 2 The LED "ALARM 2" lights when the insulation resistance of the IT system falls below the set response value *R*_{an2}.
- 5 Display The device display shows information regarding the device and the measurements.
- **6** Λ Navigates up in a list or increases a value.
- 7 MENU Opens the device menu
- ESC Cancels the current process or navigates one step back in the device menu.
- 8 RESET Resets alarms.
 - Navigates backwards (e.g. to the previous setting step) or selects a parameter.
- 9 TEST Starts the device self test.
 - > Navigates forwards (e.g. to the next setting step) or selects a parameter.
- 10 DATA Indicates data and values.
 - V Navigates down in a list or reduces a value.
- **11** INFO Shows information.
 - OK Confirms an action or a selection.

Wiring diagram

- 1 Connection to an AC system U_n
- **2** Connection to a DC system U_n
- 3 Linked with two IT systems which can be interconnected via a coupling switch. Information regarding the state of the coupling switch is not necessary.
- 4 Connection to a 3(N)AC system
- 5 Connection to the IT system to be monitored (L1/+, L2, L3/-)
- 6 Separate connection of KE, E to PE
- 7 (K1) Alarm relay 1, available changeover contacts

Provide line protection!

According to DIN VDE 0100-430, a line protection shall be provided for the supply voltage.

NOTE

According to DIN VDE 0100-430, devices for protection against a short-circuit can be omitted for the coupling of terminals L1/+, L2 and L3/- to the IT system \leq 690 V to be monitored if the wiring is carried out in such a manner as to reduce the risk of a short-circuit to a minimum. Ensure short-circuit-proof and earth-fault-proof wiring.

The connecting lines L1/+, L2, L3/- to the system to be monitored must be carried out as spur lines. No load current may be conducted through the terminals.

For UL applications:

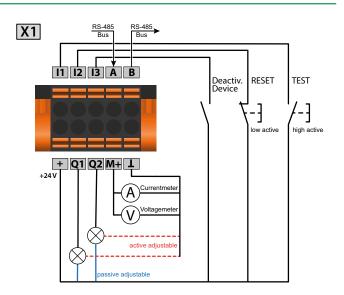

Use 60/70°C copper lines only! UL and CSA application require the supply voltage to be protected via 5 A fuses.

- 8 (K2) Alarm relay 2, available changeover contacts
- 9 Switchable resistor R for RS-485 bus termination
- 10 Ethernet interface
- 11 Digital interface
- For systems > 690 V and with overvoltage category III a fuse for the connection to the system to be monitored must be provided.

Recommendation: 2A screw-in fuses.

Connection type p	uggable screw-type terminal or push-wire terminal
Screw-type terminals:	
Nominal current	≤ 10 A
Tightening torque	0.50.6 Nm (57 lb-in)
Conductor sizes	AWG 24-12
Stripping length	7 mm
rigid/flexible	0.22.5 mm ²
flexible with ferrules, with/without plastic sleeve	0.252.5 mm ²
Multiple conductor, rigid	0.21 mm ²
Multiple conductor, flexible	0.21.5 mm ²
Multiple conductor, flexible with ferrule without	astic sleeve 0.251 mm ²
Multiple conductor, flexible with TWIN ferrule wit	plastic sleeve 0.51.5 mm ²
Push-wire terminals:	
Nominal current	≤ 10 A
Conductor sizes	AWG 24-12
Stripping length	10 mm
rigid/flexible	0.22.5 mm ²
flexible with ferrules, with/without plastic sleeve	0.252.5 mm ²
Multiple conductor, flexible with TWIN ferrule wit	plastic sleeve 0.51.5 mm ²
Push-wire terminals X1:	
Nominal current	≤ 8 A
Conductor sizes	AWG 24-16
Stripping length	10 mm
rigid/flexible	0.21.5 mm ²
flexible with ferrule without plastic sleeve	0.251.5 mm ²
flexible with TWIN ferrule with plastic sleeve	0.250.75 mm ²

Operating mode	continuous operation
	iented, cooling slots must be ventilated vertically ⁶⁾
Degree of protection internal components	IP40
Degree of protection terminals	IP20
DIN rail mounting acc. to	IEC 60715
Screw fixing	3 x M4 with mounting clip
Enclosure material	polycarbonate
Flammability class	V-0
ANSI code	64
Dimensions (W x H x D	108 x 93 x 110 mm
Weight	< 390 g
Option "W" data different from the standard	version
Rated operational current of switching elements	max. 3 A (for UL applications)

Ambient temperatures: Operating temperature Transport Long-term storage Classification of climatic conditions acc. to IEC	3K5 (condensation and formation of ice possible)

- ¹⁾ At a frequency > 200 Hz, the connection of X1 must be insulated. Only permanently installed devices which at least have overvoltage category CAT2 (300V) may be connected.
- $^{\rm 2)}\,$ Indication limited outside the temperature range -25...+55 °C.
- ³⁾ U_s [Volt] = supply voltage ISOMETER[®]
- ⁴⁾ For $U_n \ge 50$ V only.
- ⁵⁾ This is a class A product. In a domestic environment, this product may cause radio interference. In this case, the user may be required to take corrective actions.
- $^{\rm 61}\,$ Recommendation: Devices mounted at 0 $^{\circ}$ (display-oriented, cooling slots must be ventilated vertically).

For devices mounted at an angle of 45°, the max. working temperature is reduced by 10 °C. For devices mounted at an angle of 90°, the max. working temperature is reduced by 20 °C.
